# Scientific literature navigator

Find, read, check, reproduce and cite papers

This original Atlas teaching brief introduces scientific foundations and links to primary literature. It is not a third-party research paper, peer-reviewed original result, or replacement for source documents.

## Why papers are co-located by metadata

A scientific library can index the DOI, author, version, subject and original PDF link even when the full copyrighted PDF cannot be redistributed. The citation record is not the paper itself.

## Reading protocol

Read title and summary, then method and assumptions; inspect equations and experiments, note outcomes and uncertainty, compare other studies, and reproduce before generalizing results.

## What belongs in the archive

Original Atlas teaching PDF briefs live locally. Third-party papers are mirrored only with individual eligible license and original attribution, plus checksums and retrieval date.

## Agent contract

An AI must return supporting publication IDs, source URLs, review scope, known assumptions, and missing evidence. Candidate research belongs in the separate Research Desk.

## Versioned evidence

Use publisher version identifiers, hashes for actual local bytes, and a time-stamped record of source changes. Never claim a PDF snapshot was retrieved when only its metadata was visited.

## Sources and further reading

See PUB-014: arXiv license policy and PUB-013: W3C PROV-O. Rights determine redistribution, not whether one may study mathematics, equations, or scientific facts.
